

WYSE[®] Smart Network TV System

WYSE SMART NETWORK TV is a new innovative value-added hotel service platform that will fundamentally change the traditional hotel room functions and hotel operating modes through in-room office, in-room entertainment, and in-room concierge services. This hi-tech system will empower hotel operators to implement a much more profitable model.

SMART NETWORK TV integrates digital television, multimedia entertainment, and thin client computer into a thin flat panel TV. Customers can use office software, surf on the Internet, receive and send email, play online games, watch on-demand video programs, search catering and entertainment information around hotels, and even do express check-out inside the room.

Using this system, a hotel can provide more personalized services and better customer satisfaction as well. SMART NETWORK TV enables the hotel operator and the information supplier to publish their information and advertisements directly to the hotel guests. Business travelers can also print documents as well as sending faxes via the hotel network. With the integrated wireless keyboard and mouse, hotel guests can virtually work or play from anywhere inside the room. Traditionally, most hotels rely largely on their revenue from room and food service. With this new system, hotels owners can now leap into a new operating mode where value-added service will become a sizable income resource.

WYSE, the established world leader in thin client computing, has combined some of the world's most sophisticated technology and high quality components into a reliable open platform. The SMART NETWORK TV's management software enables the operator to remotely manage, support and maintain all terminals without visiting guest room. Thus, this system minimizes IT maintenance and personnel requirements, reducing costs to the lowest possible level. The product's industry standard professional operating system provides solid virus protection. After guest checked out the room, the "auto-reset" feature can instantly and automatically reset each room system to a default state.

WYSE SMART NETWORK TV is an innovative value-added service platform for the hotel industry, with a quick investment return. It is a perfect choice for hotels looking for new service offerings and better service quality.

About WYSE

Established in Silicon Valley, California., WYSE is the global leading network centric computing solution provider. Wyse provides the hardware, software, and services that shift computing complexity to the network, lower support and maintenance cost, and protect and improve access to critical information and business applications. Wyse has ranked the top in the thin-client computing solution market share for 8 years in a row. Over 40% of Global Fortune 100 companies are Wyse customers. The Wyse Asia Pacific headquarter is located in Beijing,

Features

Advantages

Integrates TV, multimedia and computer functions	The most comprehensive services in the smallest footprint, no set-top box.
Support Microsoft and other window compatible software.	Provide comprehensive business office environment.
Support Instant messaging, email, online games	Keep in touch with friends and colleagues
Support network print and fax	Provide convenience to business traveler
Support integration with hotel management system	Provide real time bill check and express check-out at customer request
